

# STUDY ON CEREBROVASCULAR INTEGRITY IN FONTAN PATIENTS

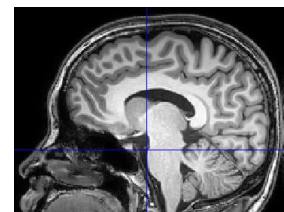

## Purpose of study:

to understand how single ventricular heart disease with Fontan procedure may affect delivery of oxygen to the brain as measured by magnetic resonance imaging (MRI).

## You may qualify if you:

- Have undergone a Fontan completion
- Are older than 13 years old
- Have no documented genetic abnormality
- Have no known brain accident
- Have no known history of postoperative seizures or extracorporeal support
- Are able to undergo about 1 hour of MRI without needing sedation
- Do not have dental braces, claustrophobia, and are not pregnant.

## Study Participation:

If you choose to participate in this study, you will be scheduled for a brain MRI scan, blood test, and neurocognitive test at Children's Hospital of Los Angeles, 4650 Sunset Blvd, Los Angeles, CA 90027. Total duration= 2 visits lasting up to approx. 3 hour. Both visits can also be done in 1 day.

**Payment:** Participants will receive \$100 per MRI visit and \$100 per completion of neurocognitive test. Parking validation will be provided as needed.
